

“Mulching leaves is a very effective and natural way of fertilizing your lawn. Just use your lawn mower to shred them in place. If the leaves on your property are thick it might take a little longer than normal mowing. But it saves you from raking and you don’t have to use one of those deafening leaf blowers. Come spring, you will have a nice green lawn. You can put any extra shredded leaves around some of your bushes as mulch.”

- Bob Munigle, Irvington Resident

Our Leaves: Love ‘Em And Leave ‘Em
